

Who we are. What we are. How we are.

...

It all started in 1993 - Rudolf borrowed 3 000 SKK, took the old family Škoda car (mom didn't know about it 😊) and started his first agency.

The year 1997, the year when the agency with the legendary red ball - ARD - was founded. Rudolf Delinčák's agency. The goal was clear, to be the market leader in information systems.

From the very beginning, we have been combining the incompatible for many. At first glance, it seems that we focus on quite different segments - companies and advertising, cities and wayfinding systems. To us, however, these connections make perfect sense.

It's been a ride ever since. We've experienced a lot of beautiful and amazing things. As well as a lot of mistakes, failures and bad decisions. But the journey we've been on has led us exactly here. We are glad to be here. We're proud of the things we're making today. It is no exaggeration to say that we are the leader in information systems in Slovakia. We have unique products. Our own technology, our own know-how. We create beautiful furniture and we are constantly experimenting with new ideas. We provide our clients with visibility within the Slovak media market. We have a personal approach. We are people. We are always learning and we want to develop further. And we develop thanks to you - our clients. We love to breathe a real-deal idea into our services and products. Look where we've come, we'll be on again tomorrow. 😊

Circum

Wayfinding systems

06

-  Anodized aluminium
-  Galvanized steel
-  PVC accessories
-  Foil coating

Each town or village offers something different to its visitors. Interesting places, rich history or natural monuments have been attracting people since time immemorial. In order to experience and see everything to the full, one should first find out about it somewhere. There are many ways to give people information. How about a clear information pole, placed in the right and frequented place? The fresh and modern design of the Circum solution is suitable for city centres, historic districts and pedestrian areas. It provides plenty of colour solutions and thus easily fits into the design of the area.

Kvadrum

Wayfinding systems

12

-  Anodized aluminium
-  Galvanized steel
-  PVC accessories
-  Foil coating

City and municipal information systems that serve to better orient visitors and residents of the city/municipality. We produce the systems in different designs. It is up to you which design appeals to you. The Kvadrum solution, with its timeless design, will tastefully complement public space and often save time and energy by pointing the visitor in the right direction.

15

Kvadrum Light

Wayfinding systems

18

-  Anodized aluminium
-  Galvanized steel
-  LED lighting

Knowing how to navigate at night will no longer be a problem. Our information systems help visitors of the towns and cities find what they are looking for. Whether it's historical buildings, institutions or street names, such a clear information column will lead them to the right place... The Kvadrum Light is a unique addition to a town or village. The pole is ecological and economical, made of noble materials. The lighting follows the standard wiring standards and regulations in force in the EU.

Mobility navigation

Wayfinding systems

24

-  Galvanized steel
-  Foil coating

A functional wayfinding system increases safety and information for citizens. In addition to informing motorists, wayfinding often improves the flow of traffic and forms part of the urban furniture. Primarily it serves as navigation, but it is also a very desirable form of promotion of your company. Show yourself to your customers, make yourself visible and guide customers straight to you. The wayfinding system is also designed for the area, thus enriching and enhancing it at the same time.

27

Area information system

Wayfinding systems

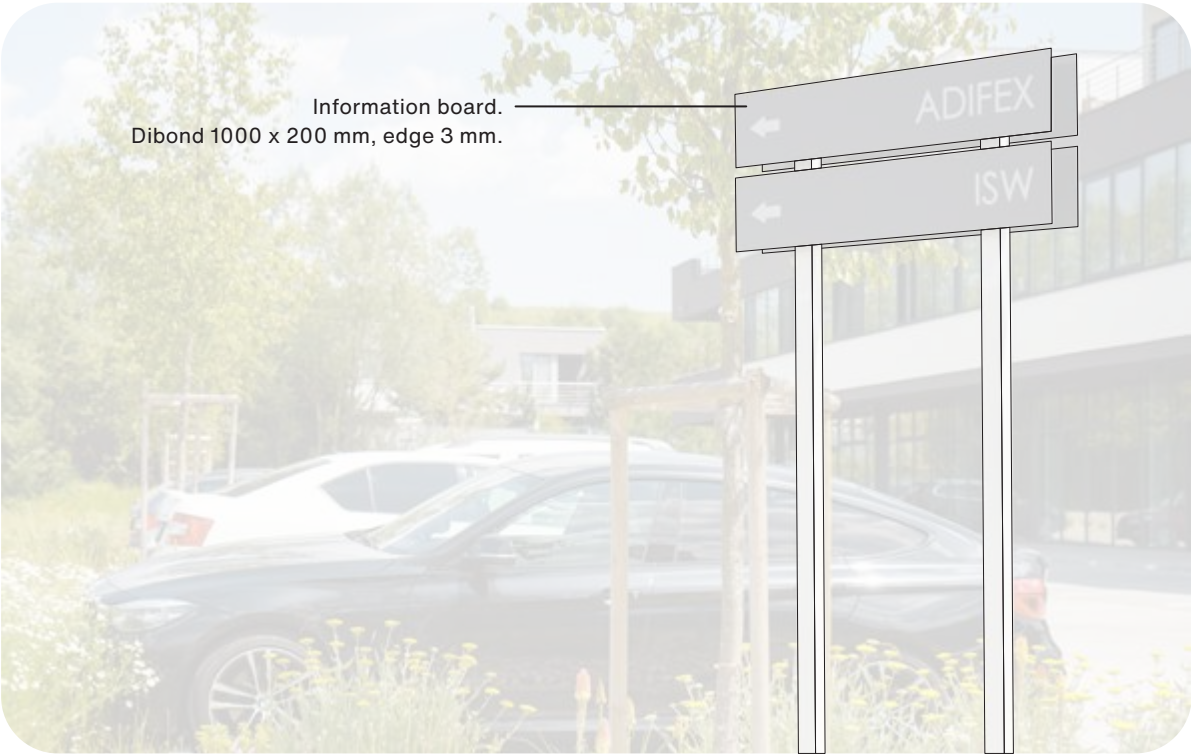

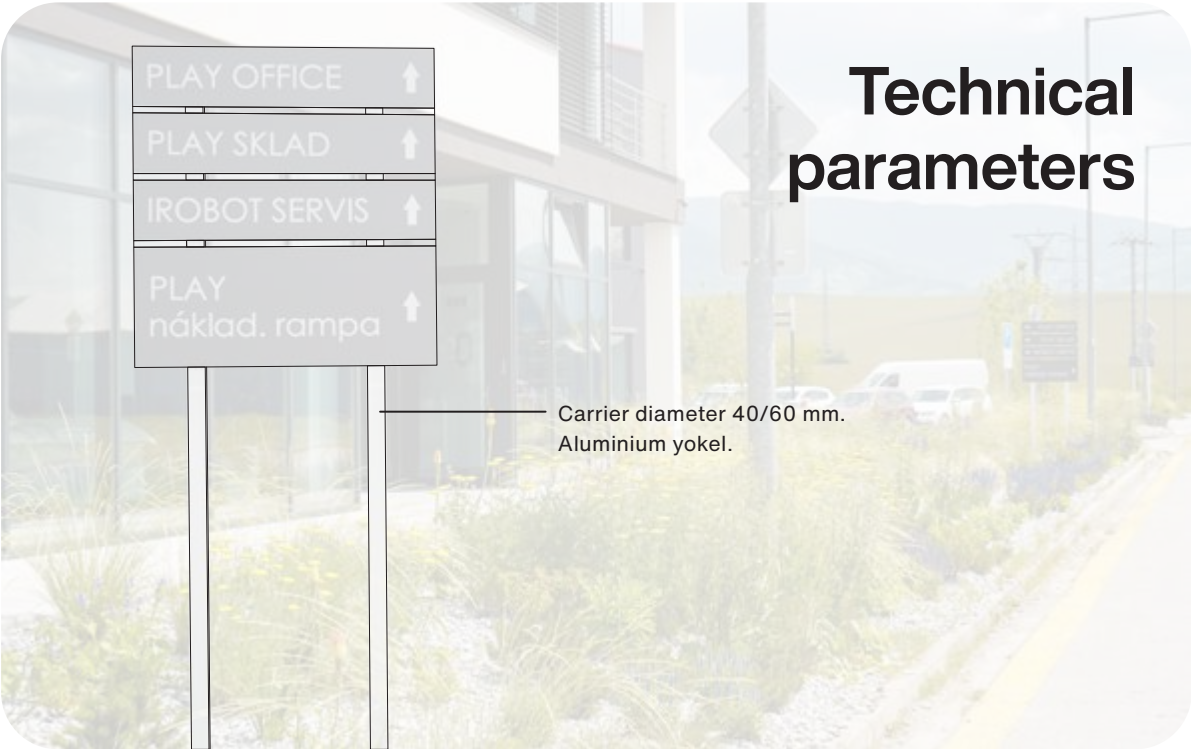

People entering the area know immediately on arrival that you care about their comfort. A good first impression enhances reputation. The area looks presentable. Signage not only improves the image of the buildings and premises, but first and foremost has a great informational benefit for visitors. The main aim of the wayfinding system is that visitors, employees and partners will no longer get lost in the area. Outdoor signage always navigates in the right direction. When it comes to information systems, we always ensure that they are fit for purpose. Of course, durable materials that are not subject to weather conditions are a matter of course for us. The modern system is adapted to the needs of today's visitor. We want you to always have as little work as possible. We will take care of both the import and the actual installation on site. The choice of colours, materials and the overall design is tailor-made for the client. Warranty and post-warranty service is also a matter of course.

Cartoon maps

Info / Instructional Media

52

The cartoon map makes it really easy to navigate. It is unique, valuable and tailor-made to the last detail. The design can adapt to the city and tourist sites. The different treatment of the map is interesting for both the tourist and the local resident. Orientation on the map is easier than on a classic map and the captured objects can be shown as they actually look or with pictograms. With its originality and easy readability, it belongs in every town and village. Discover with us the wide possibilities of its use.

53

Window to History

Info / Instructional Media

56

-  Galvanized steel
-  Safety glass
-  Foil coating
-  Dibond

Do you remember what your town looked like when you were growing up? I'm sure a lot has changed. The streets have grown and filled with buildings. A window into history gives you a glimpse of what has changed over time, even disappeared altogether. One of the pilot realisations was created in places with ideal views at selected castles and castle ruins in the Trenčín region. The glass panes became an imaginary window to the past. In cooperation with the KOČR Trenčín region we created transparent graphic panels on which line drawings complete the missing parts of the castles. The tourist thus gets a picture of the original contours of the majestic castle walls with a single glance through the glass panel.

Virtual QR Guide

Info / Instructional Media

72

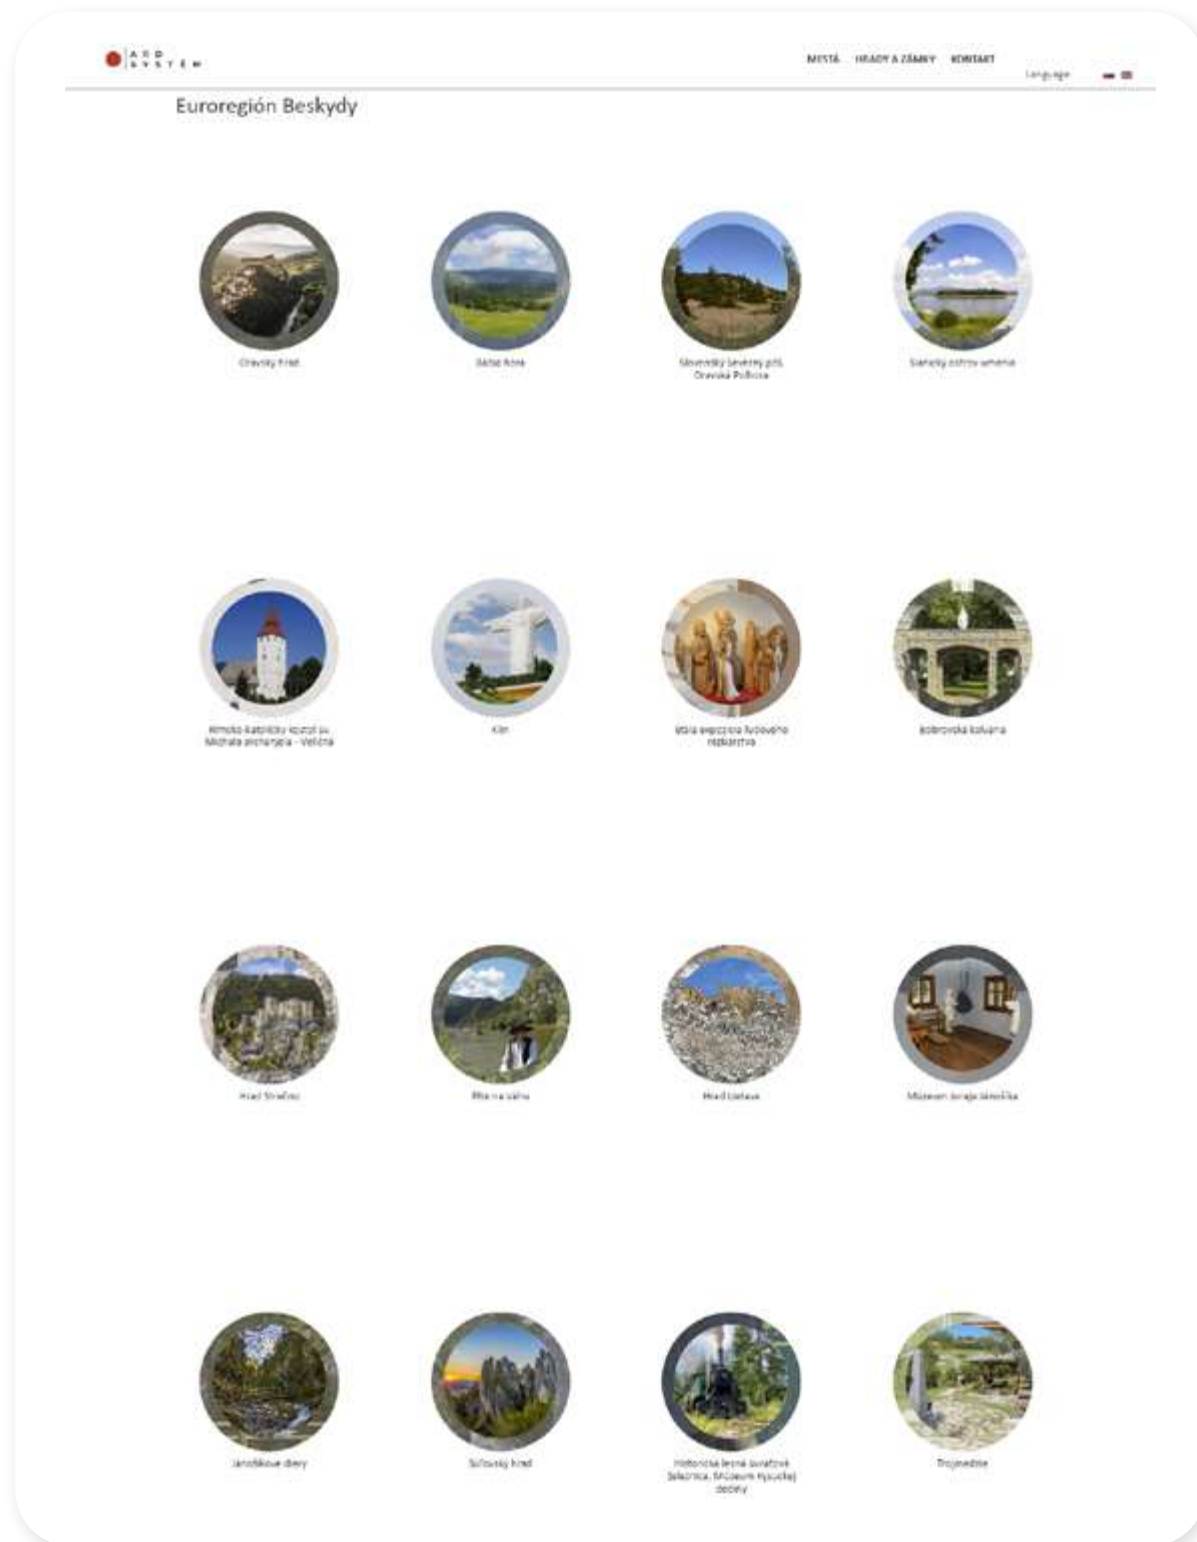

QR guide to Strečno Castle.

The modern age does not make exceptions even for historical monuments and creates its own space here. Ensuring visitor awareness is nowadays possible with the help of Virtual QR Guides. Presenting the entire area of a castle, chateau, gallery or museum in one place makes it easy to find your way around and not forget to visit any essential part of the monument. The background for this guide is provided by our online portal QRlink. In addition to photos, the visitor has complete information about the monument and Google coordinates of the site. Of course, there is also the possibility to listen to audio recordings of the text, in different languages. The spoken word together with the musical background is guaranteed to draw the listener into the action.

73

Get to know the QR guide

by scanning the QR code.

Augmented Reality

Info / Instructional Media

76

Ever wanted to know what your town looked like in the past?
See a historical figure or a building that no longer exists live?
All you need is a smartphone and modern technology.

Augmented Reality or Augmented Reality (AR) is an interactive experience that allows us to insert digital objects into the real world. AR is most commonly available through smartphones and uses camera and sensor technology to layer digital information (such as sounds, images, and text) on top of the real world we see.

Augmented reality technology gives you a glimpse of what has changed over time, even disappeared altogether. Thus, with a single glance, with the help of his smartphone, the tourist gets a picture of the original contours of architecture, the lives of famous masters, historical discoveries or the cruelty and diversity of human existence.

77

Each project

Creates a new story

Wood has surrounded us since the beginning of time and has accompanied us throughout our lives. It has a soul and has a harmonious, soothing and warming effect on people. It is a material that represents tradition, but it also adorns all modern and lavish buildings, interiors or exterior elements. Here at ARDSYSTÉM we are passionate about working with the finest materials and the best designers. The result of our passion has resulted in a unique collection - WOOD STORY.

Cutting edge design, the finest quality wood and detailed metal parts have given rise to these beautiful products. Each piece is an original that has passed through the hands of our craftsmen several times.

Each has its own story, a wooden story. After all, the life of wood does not end when it is cut down from the forest.

On the contrary. That is when it begins to live.

Bus shelter

Shelters

wood story

-  Spruce wood
-  Galvanized steel
-  Galvanized metal sheet
-  Dibond
-  Safety glass

Original design of the shelter, which is a unique addition to the public space of the city or village. When creating it, we did not primarily look at the price, but at the quality. We are of the opinion that furnishings do not only have to serve the purpose, but can also pleasantly complement our common space. Every piece of wood, glass or metal has passed through our hands several times. Nature's Stop Wood offers the possibility of combining nature with modern technology. Our inspiration is nature itself. The possibility of incorporating a green roof into a bus shelter? No problem.

Wood in combination with metal is the natural design of an atypical bicycle shelter. The simple lines blend directly into the environment of the cycle path. Rubberised metal parts make it easy to hang the bike. By adding an additional holder, it is also possible to anchor scooters or skis. The design offers a simple system for fixing the bikes with the possibility of locking on the supporting bar element. If you wish to add a map of the area for easier orientation, we will prepare a customized map for you.

The cleanliness of a public space is an important indicator of the quality of life in a city. Trash bins are a design element that not only help to keep order but also aesthetically complement the public space. The waste bin in a combination of steel and wood is particularly suitable for parks, gardens, playgrounds and pedestrian areas. The welded steel structure is lined with wooden slats, which are stained with a special varnish for outdoor use. The steel part is treated with powder varnish, which protects the varnish against adverse weather conditions. Easy handling is made possible by two internal handles.

History coloured by the eyes of children

Creative activities

Creating material for the Beskydy region... This mountain range offers spectacular views, clean air and endless possibilities for nature lovers. In addition, there are many historical monuments that are part of the region's rich cultural heritage. Stroll through castle ruins, visit museums and galleries, or immerse yourself in history in traditional village cottages.

The Beskydy Mountains are a place where nature and history come together in a unique harmony.

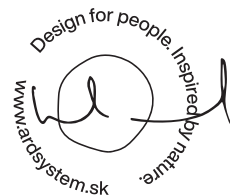

We look forward to cooperation.

...

Thank you for taking the time to read our catalogue! If you remember anything from it, it was definitely special. 😊 We hope it has intrigued you and provided useful information to help you in your decisions.

Remember, what you've seen in our catalog is just a small sample of what we are able to offer. 😊 For more information, visit our website and be sure to check out our social media as well. And most importantly, get in touch. 😊

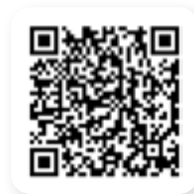

We are a strong partner of local governments and we would like to be your partner too.
